

# **POTATOES, SWEET POTATOES AND OTHER TUBER CROPS**

## General Information

### GENERAL INFORMATION

This product is enhanced with both DKP and phosphite to increase dramatic uptake of both the P and K levels. DKPhite BUILDER is designed to be used primarily for applications on row and field crops as well as tree, vegetable, berry and vine crops. DKPhite BUILDER is intended to be a supplement to a regular fertilizer program. DKPhite BUILDER may be applied by ground or air and applied on both soil and foliar applications. DKPhite BUILDER is compatible with other fertilizers and pesticides. However, a jar test is recommended prior to mixing unknown tank combinations with DKPhite BUILDER.

### Limitations, Restrictions, and Exceptions

Potatoes, Sweet Potatoes and other tuber crops: Apply every eleven to thirty days as needed to meet nutritional requirements.

### Method
