

POME FRUIT - NEW YORK

General Information

APPLICATION INSTRUCTIONS

ENVIDOR 2 SC MITICIDE is a Suspension Concentrate formulation and is active by contact on mite eggs, all nymphal stages and adult females. Application must be made as a preventive treatment or timed to coincide with early threshold level in developing mite population. ENVIDOR 2 SC MITICIDE should be applied only through properly calibrated ground application equipment except where specified otherwise within crop-specific section. Thorough coverage of all plant parts is required for optimum performance. The presence of physical barriers including, but not limited to excessive dust, sun block agents, and/or sooty-mold can interfere with the binding of ENVIDOR to target plant parts and may require higher spray volumes to achieve penetration of these barriers.

- Do not apply ENVIDOR 2 SC MITICIDE through any type of irrigation system;
- Do not apply ENVIDOR 2 SC MITICIDE in enclosed structures such as greenhouses or plant houses.

Limitations, Restrictions, and Exceptions

Restrictions

Minimum application volume: 100 GPA – ground application only.

Method

[Broadcast/Foliar Ground](#)

Pre-Harvest Interval

7 days

Restricted Entry Interval

12 hours
