

# TREATMENT FOR NON-POTABLE WATER SYSTEMS

## General Information

StorOx 2.0 works best when diluted with water with minimal levels of organic or inorganic materials, and with water having a neutral pH. Thoroughly rinse out tank with water before mixing concentrate. StorOx 2.0 will readily mix with clean, neutral water and does not require agitation.

StorOx 2.0 concentrate should not be combined or mixed with any other pesticide concentrates.

## Limitations, Restrictions, and Exceptions

TREATMENT FOR NON-POTABLE WATER SYSTEMS (wash tanks, dip tanks, drench tanks, evaporators, humidification systems and/or storage tanks) Treat water containing plant pathogens with 1.5 to 5.4 fl. oz. of StorOx 2.0 for every 10 gallons of water or use a dilution rate of 1:237 to 1:853. This will provide 1,290 to 4,641 ppm of StorOx 2.0, or 26 to 93 ppm 100% peracetic acid in the use solution. The fruits and vegetables can be sprayed or submerged in the resulting solution for a minimum contact time of 45 seconds, followed by adequate draining.
