

MULTIPLE PESTICIDE SPRAY MIXES

General Information

GENERAL INFORMATION

BLENDEX VHC is an anionic compatibility and stabilizing agent designed to improve the compatibility of liquid fertilizers with pesticides, as well as combinations of two or more pesticides mixed for single spray applications. BLENDEX VHC improves the dispersion of multi-component spray mixes and results in more uniform application of pesticide active ingredients. BLENDEX VHC can positively affect pesticide spray application and pesticide efficacy. BLENDEX VHC has some capabilities as a wetter/spreader and as a buffering agent.

Do not apply this product in such a manner as to directly or through drift expose workers or other persons. Do not spray pesticides if conditions of thermal inversion exist, or if wind direction and speed may cause drift onto adjacent areas. With both aerial and ground applications, the use of a drift control or spray deposition additive (in accordance with pesticide label directions) may reduce the potential for drift to occur. Drift minimization is the responsibility of the applicator. Consult your local and state agricultural authorities for information regarding avoiding or minimizing spray drift.

DIRECTIONS FOR USE

FOR USE WITH PRODUCTS REGISTERED FOR: AGRICULTURAL, FORESTRY, INDUSTRIAL, MUNICIPAL, NON-CROPLAND, ORNAMENTAL, RIGHTS-OF-WAY, TURF AND OTHER USES

Limitations, Restrictions, and Exceptions

BLENDEX VHC should be added to improve spray mix compatibility according to the following directions:

MULTIPLE PESTICIDE SPRAY MIXES

Suggested Use Rates: $\frac{1}{2}$ - 5 pints per 100 gallons.

Prior to any pesticide application all spray mixing and application equipment must

be clean. Carefully observe all cleaning directions on the pesticide label.

MIXING: Agitate the spray mix as much as possible. Start adding BLENDX VHC at the lowest rate. Increase the amount of BLENDX VHC as needed to resolve the spray mix incompatibility. Do not exceed the highest rate of BLENDX VHC which is recommended.
