

COOL SEASON TURF

General Information

GENERAL INFORMATION

GLIDE Si is intended for use in foliar applications. Foliar fertilization is intended as a supplement to a regular fertilization program and will not, by itself, provide all the nutrients normally required by crops or other intended plants. GLIDE Si contains a high pH, therefore mixing with other products below 7.0 pH is not recommended. GLIDE Si may be applied to turf using conventional spray equipment. Utilize soil and/or tissue tests to determine the proper rate and frequency of application.

Limitations, Restrictions, and Exceptions

COOL SEASON TURF: Apply 3 - 4 oz. per 1,000 sq. ft. every 10 - 14 days as needed to maintain turf vigor. Use the higher rate for fairway application. Apply with 1 to 3 gallons of water per 1,000 sq. ft.

STORAGE AND BLENDING INSTRUCTIONS

Fill mix tank $\frac{1}{2}$ full of water and start agitation. Properly measure and add GLIDE Si to the tank and finish filling with water and /or other water-soluble material. Store in original container.

TANK-MIXING

GLIDE Si may be mixed with other N and K sources. Do not mix with fertilizers containing phosphate or with acid-based fertilizers. GLIDE Si may be tank-mixed with CoRoN turf fertilizers for longer lasting residual N.
