

VEGETABLE CROPS, ROW CROPS, ETC.

General Information

GENERAL INFORMATION

HYDRA-HUME DGA is a granular adjuvant rich in humic acids from raw leonardite.

Products containing humic acids, such as HYDRA-HUME DGA, when used as directed, may improve deposition and efficacy of pesticide and fertilizer applications.

HYDRA-HUME DGA is effective as an anticaking agent, dispersant as well as being efficacious in dust abatement.

Limitations, Restrictions, and Exceptions

SUGGESTED DIRECTIONS

HYDRA-HUME DGA can be applied to all crops including: vegetable crops, row crops, field crops, trees, vines, ornamentals, lawns, and garden landscaping in conjunction with pesticides and fertilizers that are applied to the soil.

Apply 10 - 40 lbs./acre with or in conjunction with fertilizer use that is consistent with a sound soil fertility program.
