

FAIRWAYS, LAWNS, ATHLETIC FIELDS

General Information

GENERAL INFORMATION

SCATTER is a blend of nonionic wetting agents impregnated onto an inert organic carrier. This results in a dry granular formulation that provides equal performances as liquid products when used at recommended rates. SCATTER can be applied safely at full rates in both spring and summer. SCATTER is particularly useful for treating small areas of difficult to wet soil. SCATTER also contains agents to prevent foaming problems.

Limitations, Restrictions, and Exceptions

FAIRWAYS, LAWNS, ATHLETIC FIELDS

SCATTER 9-12 lbs./1000 square feet every 6 months.

NOTE: SCATTER can enhance uniform turf seed grass germination by improving water availability and improving drainage. Scatter 1 ½ lbs./1000 square feet during soil preparation for seeding. Then continue application according to instructions noted in Fairways, Lawns, and Athletic Fields section of the label.

Refer to table of the Label for measuring Scatter. SCATTER weight to volume measures are suggestions only.
