

SOIL APPLICATION - MODERATE DEFICIENCY

General Information

PRODUCT INFORMATION

TRACITE GHEP Z-F-M PLUS is a micronutrient compound formulated with a complexing agent derived from the natural organic sugars of glucoheptonic acids. These sugar acids have the capacity to form multi-bond, water-soluble complexes with various metal ions resulting in an exceptionally stable product. The micronutrient stays soluble and mobile and does not react with soil or fertilizer. TRACITE GHEP Z-F-M PLUS is non-phytotoxic and is safe to use as a foliar or aerial application or in X-O-X fertilizer grades used in drip irrigation.

Glucoheptonate is a natural sticking agent making it very effective for foliar application.

DIRECTIONS FOR USE

TRACITE GHEP Z-F-M PLUS readily mixes in water and is compatible with most pesticides. It may be added to nitrogen solutions, X-O-X and other mixed liquid fertilizers and it may be impregnated on dry fertilizers.

DO NOT MIX WITH HIGH PHOSPHATE FERTILIZERS SUCH AS 10-34-0.

Due to the variety of chemicals and uses it is advisable to test compatibility before mixing. Mixing sequence: 1) water; 2) TRACITE GHEP Z-F-M PLUS; 3) other fertilizers or pesticides.

GENERAL RECOMMENDATIONS

TRACITE GHEP Z-F-M PLUS can be used on all crops for the prevention and correction of micronutrient deficiencies.

SOIL APPLICATION: Optimum rate of application will vary between fields, depending on soil pH, organic matter content and other factors. Therefore, for best results follow soil test and plant analysis recommendations. In the absence of test results use the following as a guide:

Limitations, Restrictions, and Exceptions

MODERATE DEFICIENCY: 2 - 4 qts. per acre
