

COMPLEXED MICRONUTRIENT FOR PREVENTION AND CORRECTION OF IRON DEFICIENCY IN CROPS

General Information

GENERAL INFORMATION

TRACITE IRON 5% is a complexed micronutrient designed for foliar or soil application. It is recommended for use as an additive in dry or liquid fertilizers and is compatible with most of the herbicides, insecticides and agricultural chemicals that can be utilized in combination with liquid fertilizers. TRACITE IRON 5% may not be compatible with some liquid fertilizer formulations. A pre-mix "jar test" is recommended prior to mixing with liquid fertilizer to check compatibility. The addition of TRACITE IRON 5% to water will decrease alkaline hydrolysis associated with all organo-phosphate insecticides.

NOTE: TRACITE IRON 5% cannot be used in liquid fertilizers which contain orthophosphates.

DO NOT MIX WITH CATIONIC PESTICIDES.

RECOMMENDED CROPS

TRACITE IRON 5% can be applied to the following crops: Vegetables, fruit, row crops, deciduous fruit and nut trees, citrus trees and commercial turf and ornamentals.

APPLICATION AND MIXING GUIDE

Rates and timing of applications are dependent on local conditions and should always be made as a result of soil and/or plant tissue analysis and in conjunction with your local agricultural authority.

TRACITE IRON 5% may be applied by ground or aerial application. Use enough water for thorough uniform coverage of foliage or soil. Thorough coverage is necessary for best results and the addition of a non-ionic surfactant such as INDUCE is recommended.
