General Information

Whirlwind is an emulsifiable concentrate for use in listed crops. Target pests and application rates are provided in the accompanying tables.

The label booklet is not valid for use of this product in the state of Mississippi. For use in the state of Mississippi, refer to Whirlwind supplemental labeling entitled “Use Directions for the State of Mississippi.”

General Use Precautions

Insect control may be reduced at low spray volumes under high temperature and wind conditions.

Some reduction in insect control may occur under unusually cool conditions.

Flood irrigation: To avoid contamination of irrigation tail waters, do not flood irrigate within 24 hours following a soil surface or foliar application of Whirlwind.

Application Guidelines

BROADCAST FOLIAR APPLICATION

Apply with conventional power-operated spray equipment using nozzles and spray pressures recommended for insecticides. Apply Whirlwind in a spray volume of not less than 2 gallons per acre for aerial application equipment (fixed-wing or helicopter) or not less than 10 gallons per acre for ground equipment, unless otherwise specified. Increase spray volume to ensure adequate coverage with increased density and height of crop canopy. See Spray Drift Precautions section for recommendations on droplet size.

GROUND APPLICATION: Orient the boom and nozzles so that uniform coverage is obtained. The swath width should not be wider than the boom. Follow nozzle manufacturer’s recommendations for insecticide nozzles with respect to nozzle
type, pressure, and spacing.

**BROADCAST SOIL APPLICATION**

Apply with conventional power-operated spray equipment that will apply the product uniformly to the soil surface. Use nozzles that produce medium or coarse droplets (235-400 microns). Unless otherwise indicated, a spray volume of 10 gallons or more per acre is recommended. For band application, use proportionally less spray volume.

**AERIAL APPLICATION**

Use a minimum spray volume of 2 gallons per acre and follow recommendations for best management practices for aerial application, above.

Marking of swaths by flagging, permanent markers or use of GPS equipment is recommended.

**CHEMIGATION (SPRINKLER IRRIGATION)**

Whirlwind may be applied to the following crops through sprinkler irrigation equipment: alfalfa, almond (orchard floors only), citrus (orchard floors only), corn (field and sweet), cotton, cranberry, mint, sorghum, soybeans, sugarbeet, orchard floors (pecan and walnut), walnut (orchard floors only), and wheat, or other crops as specified in supplemental labeling. Do not apply this product by chemigation unless specified in crop-specific directions in the label or Dow AgroSciences supplemental labeling. Do not apply to labeled crops through any other type of irrigation system.

Note: Unless otherwise indicated in specific use directions, the application rates for chemigation are the same as those recommended for broadcast application.

**Special Use Directions for Sprinkler Irrigation**

The following use directions must be followed when Whirlwind is applied through sprinkler irrigation systems. Thoroughly clean the injection system and tank of any fertilizer or chemical residues, and dispose of the residues according to state and federal laws. Flush the injector with soap and water. Determine the amount of Whirlwind needed to cover the desired acreage. Mix according to instructions in the Mixing Directions section and bring mixture to desired volume. Do not add crop oil when Whirlwind is applied by chemigation. Maintain continuous agitation during mixing and throughout the application period. Set the sprinkler system to deliver
the desired inches of water per acre. Start the water pump and sprinkler, and let
the system achieve the desired pressure and speed before starting the injector.
Start the injector and calibrate the injector system according to Calibration
instructions in the following Special Use Precautions section. The mixture containing
Whirlwind must be injected continuously and uniformly into the irrigation water line
as the sprinkler is moving to ensure uniform application at the correct rate. When
the application is finished, flush and clean the entire irrigation and injector system
prior to shutting down the system.

Limitations, Restrictions, and Exceptions

Apply as a broadcast spray using a total spray volume of 10 gpa or more using
ground equipment.

Chemigation: Whirlwind may be applied through sprinkler irrigation systems at
recommended

broadcast application rates to control listed foliar pests. See Chemigation (Sprinkler
Irrigation) section for application instructions.

Pest-Specific Use Directions:

1. Garden symphylans: Apply preplant to the soil surface. On the same day of
treatment, incorporate the insecticide into the top 2 to 4 inches of soil using a disc,
field cultivator, or equivalent equipment.

2. Mint borer: Apply postharvest when field counts indicate damaging insect
populations are developing or present. If ground applied, follow with approximately 1
acre inch of sprinkler irrigation immediately after application to incorporate the
insecticide into the soil or apply by chemigation.

Specific Use Restrictions:

- Make only 1 application of Whirlwind or other product containing chlorpyrifos
during the growing season.

- Do not make more than 1 preplant incorporated application in the spring.
- Do not use in conjunction with a broadcast foliar application of Whirlwind for cutworm control.

- Make only 1 postharvest application per season of Whirlwind or other products containing chlorpyrifos.

- Maximum single application rate is 2 lb ai chlorpyrifos per acre.

Method

Broadcast/Foliar Ground
Pre-Harvest Interval

90 days

Rates
