

# CONCENTRATED POTASH SOLUTION - GENERAL USE

## General Information

### GENERAL INFORMATION

TRACITE 0-0-15 is a highly concentrated water based solution of potash useful in the correction of Potash deficiency in plants. The unique formulation of TRACITE 0-0-15 provides a non-caustic and non-corrosive liquid that is stable at cold temperatures. Applications of TRACITE 0-0-15 through mixing, application, and irrigation equipment may reduce the rate and degree of corrosion that occurs when this equipment is exposed to fertilizer solutions. In addition, TRACITE 0-0-15 contains components that reduce the surface tension of spray application water that is applied with it. Such reductions may improve the permeability of the applied spray solution on hard to wet soils.

### Limitations, Restrictions, and Exceptions

Application rates for general use are 2-6 gallons per acre.
