

APPLES, PEARS - NEW PLANTINGS

General Information

DIRECTIONS FOR USE

Proper pruning of young non-bearing trees promotes the growth and development of strong, well-spaced branches that can support more larger sized fruit, resist wind and ice damage, improve spray penetration for better insect and disease control and improve light penetration for better fruit set, size and color. Non-bearing citrus trees sprout vigorously from the rootstock and from pruning cuts made on hard wood branches. Tre-Hold Sprout Inhibitor controls sprouting from pruning cuts, trunks, and rootstocks. Tre-Hold Sprout Inhibitor is a ready to use product. Do not allow Tre-Hold Sprout Inhibitor to contact buds or foliage as injury may result. Mix thoroughly before using.

Limitations, Restrictions, and Exceptions

APPLES AND PEARS

Do not apply Tre-Hold Sprout Inhibitor to trees less than one year old as injury and stand loss will occur. Do not treat any tree that is not vigorous, healthy, and free from stress.

NEW PLANTINGS: Apple and pear trees, healthy, vigorous and free from stress, may be treated after planting when the trees show established growth. Remove sprouts and follow the application procedures described below. Do not apply to non-established or stressed trees as injury and stand loss will result.
