

BULB ONIONS

General Information

Trigard OMC is a 75% wettable powder which, when applied to seed according to the following directions for use, will control onion maggots on bulb vegetables. Apply Trigard OMC to seed at the rate of 6.6 lbs. of product per 100 lbs. of seed (4.95 lbs. active ingredient per 100 lbs. of seed).

Do not apply concurrent applications at planting time of insecticide products which have activity against onion maggot.

Note: Do not harvest bulb vegetables grown from seed treated with Trigard OMC within 60 days of planting.

Limitations, Restrictions, and Exceptions

BULB ONIONS

Many insect pests are known to develop reduced sensitivity to insecticides after repeated exposure. Development of reduced sensitivity cannot be predicted. Syngenta cannot assume liability for crop damage resulting from development of insect strains exhibiting reduced sensitivity to cyromazine. As with any insecticide, the use of this product should conform to management strategies established for the use area that reduce the probability of insensitive strain development. Consult your agricultural advisor for management strategies and recommended pest management practices for your area.
