

IRRIGATION/SOIL DRENCH

General Information

General Information

BIO-POWER is intended as a supplement to a regular fertilization program and will not, by itself, provide all the nutrients normally required by agricultural crops. BIO-POWER can be used with a starter fertilizer, infurrow, transplant water, drip or overhead irrigation/ soil drench or foliar treatment for any crop. BIO-POWER is water- soluble and will be taken up by plant roots, seed and foliage without phytotoxicity when used as directed. BIO-POWER is particularly effective as a fertilizer supplement for stressed crops.

Limitations, Restrictions, and Exceptions

IRRIGATION/ SOIL DRENCH: Prepare a tank mix solution to inject 48 to 64 fl. oz. per acre into the irrigation system. Apply BIO-POWER near the end of the watering cycle
