

FRUIT AND NUT CROPS

General Information

General use: 5 lb per acre in 100 gallons of water or 5 lb per acre in 80 Imperial gallons of water.

Limitations, Restrictions, and Exceptions

FRUIT AND NUT CROPS: As a foliar spray use at the rate of 5 to 10 lb per acre. Apply early in the season or when improved vigor is desired. Three to four applications may be applied per season. These rates may be applied to citrus (all kinds), apples, peaches, pears, pecans, filberts, avocados, plums, prunes, apricots, cherries, walnuts, almonds, nectarines, grapes and other vine crops. Apply early in the season during flush of new growth and before fruit matures. Avoid spraying late in the season where fruit color and maturity is delayed by nitrogen applications. Use a minimum of 100 gallons of water per acre for dilute sprays and a minimum of 5 gallons per acre in concentrate sprays. Compatible with most pesticides used.
