

## **CROP USAGE - FOR STRESS RELIEF**

### General Information

#### GENERAL USE INSTRUCTIONS

For best results, X- CYTE should be applied before noon or after 4 p.m. a spreader-sticker (surfactant) cleared for application to growing crops should be used with the product. Store X- CYTE in a cool place and out of direct sunlight. Any spigot or pump put into an X- CYTE drum should be cleaned with disinfectant (bleach and water, etc.) before using, unless the whole drum is to be used at one time. Mix X- CYTE with enough water to get thorough coverage of plant surfaces. X- CYTE is compatible with most other spray materials.

### Limitations, Restrictions, and Exceptions

#### CROP USAGE - ALL CROPS LISTED FOR STRESS RELIEF

Use 1 pint X- CYTE per acre (1.2 liters per hectare) any time a crop is prematurely dying down (loss of color) due to stress caused by one or more of the following conditions: weather (frost, drought, excessive moisture), insect infestation, fungus attack, and/ or herbicide burn.
