

IMPREGNATION RATES: DRY FERTILIZERS

Limitations, Restrictions, and Exceptions

IMPREGNATION RATES: DRY FERTILIZERS

Recommended rate range is 1 to 4 gallons of Accomplish per ton of dry fertilizer depending on makeup of dry fertilizer blend. Blends that contain both potassium and phosphate inputs will absorb more Accomplish than those made from a higher percentage of urea. Higher rates of impregnation are possible when fertilizer handling systems are capable of adding drying clay. Contact your Loveland Products representative for specific information.

PRE-BLENDING OR TANK MIXING RATES: LIQUID FERTILIZERS

If mixing with liquid fertilizer or herbicides, perform a Jar Test to assure compatibility with different mixtures of chemicals. It is typically recommended to mix in the following order: fertilizers, chemicals, water, and Accomplish. Do not mix with fungicides EXCEPT Azoxystrobin products. Liquid fertilizers in the pH range of 5 to 9 are compatible with Accomplish.
