

COOL SEASON

General Information

DIRECTIONS FOR USE AND APPLICATION RATES

Grigg Brothers non-ionic, organic surfactant, INTAKE or Ultraplex is recommended for all foliar applications to decrease drop size and enhance wetting of entire surface.

IMPORTANT: For best results apply as a foliar spray early in the morning or late evening. Allow to dry on plant before irrigation.

GRIGG BROTHERS Chelates are especially designed to mix with phosphate fertilizers. With severe deficiency use the highest rate of application.

Foliar fertilizer is intended as a supplement to a regular fertilization program and may not, by itself, provide all the nutrient normally required by crops or other intended plants.

Limitations, Restrictions, and Exceptions

COOL SEASON

Apply 1 -3 fl. oz. per 1,000 sq. ft. Repeat as needed.
