

# **TURF - NEW CONSTRUCTION**

## General Information

### Applications for Z-mendit

Z-mendit is a soil amendment that, when added to a root zone improves plant performance. It is a clinoptilolite and when added to other growth media enhances its performance.

Use for sports turf, golf greens & tees, in greenhouse-nursery mixes, in garden soils, planting beds and containers, for landscaping, roof gardens, transplants, and horticultural crops.

Particularly suitable for sandy and coarse textured soils.

### Divot Mix:

Mix Z-mendit with divot mix for a 50% ZeoPro 50% sand ratio to enhance germination and moisture and nutrient retention capabilities.

### Limitations, Restrictions, and Exceptions

#### Turf - New Construction:

Z-mendit will enhance establishment of seed, sprigs or sod. Apply at least 5% by volume to top 6" (15 cm). Recommended rate is 10% - 15% by volume. Blend with sand prior to placement or lay out a grid of known size and apply the appropriate amount to each grid. Blend with rake or rototiller then proceed with seeding, sprigging or sodding.
