

VEGETABLES, CUCURBITS, FIELD AND ROW CROPS - FOLIAR APPLICATION

General Information

GENERAL INFORMATION

ACTAGRO 4% MANGANESE is formulated in a patented process for the prevention or correction of manganese deficiencies in plants and can be effectively used for both foliar and soil applications. It contains Organic Acids which may aid in soil applied and foliar applied micronutrient availability.

ACTAGRO 4% MANGANESE is recommended for foliar application as a dilute spray and should be applied early in the crops growth cycle for maximum utilization.

ACTAGRO 4% MANGANESE is recommended for band application during preplant, planting or sidedress operations.

ACTAGRO 4% MANGANESE is non-phytotoxic when used as directed and may be combined with most pesticides and fertilizers.

ACTAGRO 4% MANGANESE will be influenced by differences in varieties, soil and environmental conditions and should be applied under conditions of optimum plant growth. Optimum conditions are defined as adequate humidity, moderate temperatures and adequate soil moisture. Optimum conditions for most crops generally occur during early morning or late evening hours.

Limitations, Restrictions, and Exceptions

VEGETABLES, CUCURBITS, FIELD AND ROW CROPS

Apply 1 to 4 pints per acre in 15 to 25 gallons of water per acre as a directed foliar spray when plants are 8 to 12 inches in height. For aerial applications, use a minimum of 5 gallons of water per acre. May be applied through Center Pivot Irrigation Systems.

NOTE: For best results use the lowest possible volume for thorough coverage and a small droplet size.
