

# FOR USE ON POSTEMERGENCE HERBICIDE

## General Information

### GENERAL INFORMATION

Bronc Plus is a proprietary blend of ammonium sulfate solution and surfactant with nonionic properties. Bronc Plus is specially formulated to be used with many postemergence herbicides, which perform best when mixed with ammonium sulfate and require the addition of a nonionic surfactant.

Bronc Plus is filtered through a special process to remove impurities and other contaminants generally associated with dry or other liquid ammonium sulfate products. This lack of sedimentation reduces nozzle plugging, wear and corrosion of equipment.

### Limitations, Restrictions, and Exceptions

### SUGGESTIONS FOR USE

Bronc Plus should be used to improve the performance of postemergence herbicides where an ammonium nitrogen based product is required.

3 gal/100 Bronc Plus = 8.5 lbs. dry Ammonium Sulfate

6 gal/100 Bronc Plus = 17 lbs. dry Ammonium Sulfate

All ingredients in this product are exempt from the requirements of a tolerance.
