

COMMERCIAL COTTON SEED TREATMENT

General Information

GENERAL INFORMATION

NU-FLOW M-HF Seed Treatment Fungicide is recommended as a seed treatment to protect against sore shin (*Rhizoctonia solani*) and black root rot (*Thielaviopsis basicola*) which impairs good cotton seed germination and seedling development. NU-FLOW M-HF can be tank-mixed with other properly labeled cottonseed protectants such as Apron TL for Pythium control. NU-FLOW M-HF is a liquid formulation that can be pumped or poured directly into the cotton seed treater or diluted with water, provided the recommended amount of product is applied.

Agricultural Chemical: Do not ship or store with food, feeds, drugs or clothing.

Limitations, Restrictions, and Exceptions

COMMERCIAL COTTON SEED TREATMENT

Label Treated Seed “This seed is treated with Nu-Flow M-HF which contains the active ingredient myclobutanil. Do not use for food, feed, oil production or any other purpose except planting. Do not graze cotton plants grown from treated seed. Store away from feed and foodstuffs.”

In California, this product must be applied through a closed system such as WECO-RED (Returnable Evacuation Device).

Use 1.25 to 4 fl. oz of Nu-Flow M-HF (0.019 to 0.062 lb active ingredient) per 100 lbs of cotton seed to reduce seeding damage caused by sore shin (*Rhizoctonia solani*) and black root rot (*Thielaviopsis basicola*).

For cotton seed treatment, always use Nu-Flow M-HF with EPA approved dye or colorant that imparts an unnatural color to the seed.
