

LIVESTOCK SPRAYS

General Information

DIRECTIONS FOR USE:

R-20 Spreader-Activator is a combined Spreader-Activator for increasing the efficiency of various agricultural chemicals. It should be used where quick wetting and uniform coverage of an agricultural chemical is required.

Increases absorption and translocation -- inhibits rust and corrosion.

Rates of R-20 Spreader-Activator may vary with the conditions of application. Use just enough to form a uniform film. Excessive rates will not result in excessive foaming.

Always add as the last ingredient to tank with agitator running.
