

CORN POST EMERGENCE (ATRAZINE ON QUACKGRASS, ETC.)

General Information

DIRECTIONS FOR USE:

R-20 Spreader-Activator is a combined Spreader-Activator for increasing the efficiency of various agricultural chemicals. It should be used where quick wetting and uniform coverage of an agricultural chemical is required.

Increases absorption and translocation -- inhibits rust and corrosion.

Rates of R-20 Spreader-Activator may vary with the conditions of application. Use just enough to form a uniform film. Excessive rates will not result in excessive foaming.

Always add as the last ingredient to tank with agitator running.

Limitations, Restrictions, and Exceptions

Corn Post Emergence (Atrazine on quack grass, etc.) – Use 0.25% to 1% of total spray. Use higher rates at lower temperatures.
