

## **AERIAL APPLICATION**

General Information

General Information

MANNI-PLEX products are specifically formulated for foliar delivery of micronutrients.

Warning: Some crops may be injured by the application of Boron. Application of fertilizers containing Molybdenum may result in forage crops that contain levels of Molybdenum that are toxic to ruminant animals.

Use a minimum 10 gallons water per acre with ground spray equipment and a minimum of 2 gallons for aerial application. The use of an adjuvant may be desired to improve the properties of spray solution. Performing trials with adjuvants may be useful in determining the best inclusion rates for optimal performance. Optimum rate of application will vary between fields, depending on soil pH and organic matter content. For best results, follow soil test or plant analysis recommendation.

Limitations, Restrictions, and Exceptions

Aerial Application

Apply 1-2 pints MANNI-PLEX COMPLETE per acre with 5 gallons of water. Multiple applications are recommended for best results.
