

# FERTIGATION AND SOIL APPLICATIONS

General Information

General Information

- Significantly reduces the effects of transplant shock
- Aids in overcoming damage caused by frost

PLANT START is a high Phosphorous solution formulated to aid in the growth of roots and assist plants in overcoming stressful conditions.

PLANT START is formulated with anti-stress substances and helps promote early growth and healthy root systems which will establish the plant more quickly, and in turn, promote vigorous top growth. PLANT START is recommended for use as a supplement to a well balanced fertilizer program.

Made from the highest quality nutrient sources, PLANT START provides a quality source of quickly available nitrogen to promote healthy top growth, while the Phosphorous and Potassium are readily available to ensure strong rooting.

PLANT START is non-clogging and non-abrasive to equipment. It is compatible with most fungicides, herbicides and insecticides; however, compatibility tests are recommended.

Limitations, Restrictions, and Exceptions

Fertigation and Soil Applications: PLANT START can be applied via drip or sprinkler irrigation.
