

AERIAL APPLICATION

General Information

General Information

BRANDT SMART MN is specifically formulated for foliar delivery of Manganese for all crops. BRANDT SMART MN contains a new proprietary Brandt Smart System that provides improved physical and biological compatibility of micronutrients with pesticides, including glyphosate formulations even in the absence of ammonium sulfate (AMS).

Use a minimum 10 gallons water per acre with ground spray equipment and a minimum of 2 gallons for aerial application. The use of an adjuvant may be desired to improve the properties of spray solution. Performing trials with adjuvants may be useful in determining the best inclusion rates for optimal performance. Optimum rate of application will vary between fields, depending on soil pH and organic matter content. For best results, follow soil test or plant analysis recommendation.

Limitations, Restrictions, and Exceptions

Aerial Application

Apply 1-2 pints BRANDT SMART MN per acre with 5 gallons of water. Multiple applications are recommended for best results.
