

CHRISTMAS TREES

Limitations, Restrictions, and Exceptions

CHRISTMAS TREES

For use as a post-emergent treatment on Douglas fir, Grand fir, Nobel fir, or Scotch pine plantings for Christmas trees. Do not graze or feed forage from treated areas to livestock.

Apply a minimum 20 gallons of solution per acre for ground application. Aerial application is prohibited.

Spray at a rate of 1 gallon of solution per acre (without a surfactant) after bud-break and hardening of new tree growth to control western bracken (*Pteridium aquilinum* var. *pubescens*), which should be in full frond.
