

IRRIGATION SYSTEM APPLICATIONS (SOIL, DRIP OR SPRINKLER)

General Information

GENERAL INFORMATION

FOLI-GRO is manufactured specifically for use as a liquid foliar or soil applied fertilizer. Its use is suggested as part of a Total Nutrition System program to enhance yields and quality.

Under adverse environmental conditions (water stress, cold soils, salts, etc.) when used as directed FOLI-GRO may supply otherwise unavailable plant nutrients. Research has shown that foliarly applied nutrients are absorbed more efficiently by plants than are those supplied in the soil under the above conditions.

FOLI-GRO is uniquely formulated to supply nutrients in a readily available form for the plant to obtain a quick response to needed elements. A tissue testing program may be helpful to monitor and maintain optimum plant growth and quality. Nutrient translocation inside the plant is generally more rapid when applied foliarly.

DIRECTIONS FOR USE

FOLIAR APPLICATIONS (Ground or Air): Apply the recommended amount of FOLI-GRO Manganese 5% per acre per application throughout the growing season as needed to maintain adequate levels for growth. Severe deficiencies may require more frequent applications. Use sufficient water to insure good coverage. Do not exceed one quart per gallon of water. If applied too concentrated, slight burning of the foliage may occur.

Limitations, Restrictions, and Exceptions

IRRIGATION SYSTEM APPLICATIONS (SOIL, DRIP OR SPRINKLER)

FOLI-GRO Manganese 5% may be applied through irrigation systems at a rate of 1/2 to 1 1/2 gallons per acre. Before applying with other fertilizers always check compatibility. Contact your local FOLI-GRO dealer or Wilbur-Ellis Company salesperson for more information.

Note: FOLI-GRO Manganese 5% is compatible with most pesticides and fertilizers,

and can be applied in existing spray programs. When using a mixture that has not been used before with FOLI-GRO Manganese 5%, always try a small sample mix before application, or check the compatibility by doing a Jar Test.
