

APPLICATION

General Information

GENERAL INFORMATION

FOLI-GRO SUPER Mn is designed primarily for foliar applications to prevent or correct nitrogen, sulfur and manganese deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality.

Application of FOLI-GRO SUPER Mn is a means of obtaining a quick response to needed elements. Foliar applications of FOLI-GRO SUPER Mn may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system.

FOLI-GRO SUPER Mn should be used as part of a comprehensive Total Nutrition System for optimizing plant growth, development, yield and quality.

COMPATIBILITY

FOLI-GRO SUPER Mn is compatible with most common foliar pesticides and nutrients. The form of chelation agent used in FOLI-GRO SUPER Mn should not be buffered to a pH of less than 6.0. FOLI-GRO SUPER Mn contains fully chelated manganese, which will not interfere with glyphosate activity. Do not mix with calcium products such as calcium nitrate or chloride. Always jar test new combinations for compatibility prior to field mixing.

Limitations, Restrictions, and Exceptions

Do not apply when plants are under excessive heat or moisture stress. Applications of foliar nutrients to leafy vegetables or soft-skinned fruits during periods of excessive temperatures may cause cosmetic injury. Applications of certain micronutrients to fleshy fruits within 30 days of harvest may result in staining of rind or skin.

Apply at 2-3 quarts per acre in volumes less than 10 gpa and up to 4 quarts per acre in spray volumes of 20 gpa or greater. FOLI-GRO SUPER Mn may also be applied directly to soil or through irrigation conveyance systems (drip, sprinkler,

furrow, flood, etc.). For use in pressurized irrigation systems, always flush system with clean water following application of all fertilizer sources.
