

PRE-BLOOM FOLIAR APPLICATION - BY GROUND

General Information

GENERAL INFORMATION

FOLI-GRO Western Mix is designed primarily for foliar applications to prevent or correct micronutrient deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality. Application of FOLI-GRO Western Mix is a means of obtaining a quick response to needed elements. Foliar applications of FOLI-GRO Western Mix may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system. FOLI-GRO Western Mix should be used as part of a comprehensive Total Nutrition System for optimizing plant growth, development, yield, and quality.

Limitations, Restrictions, and Exceptions

May be applied with oil dormant/delayed dormant or with existing crop protection program up to pre-bloom (popcorn stage) at 2 to 6 quarts per acre with sufficient water for thorough coverage.

Caution: Do not apply more than 1 pint of FOLI-GRO Western Mix per gallon of water by air or ground. The rate per acre depends upon the size of the tree and degree of deficiency.
