

SOIL APPLICATION

General Information

GENERAL INFORMATION

FOLI-GRO Western Mix is designed primarily for foliar applications to prevent or correct micronutrient deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality. Application of FOLI-GRO Western Mix is a means of obtaining a quick response to needed elements. Foliar applications of FOLI-GRO Western Mix may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system. FOLI-GRO Western Mix should be used as part of a comprehensive Total Nutrition System for optimizing plant growth, development, yield, and quality.

Limitations, Restrictions, and Exceptions

Apply 1 to 1½ quarts per tree with pesticide, fertilizer or irrigation water (overhead, drip or emitter) during active growing season. Correction may not be evident for several months. For other crops, apply 1-3 gallons per acre unless otherwise noted below for specific crops.
