

ROW, FIELD CROPS - FOLIAR

General Information

GENERAL INFORMATION

FOLI-GRO Western Mix is designed primarily for foliar applications to prevent or correct micronutrient deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality. Application of FOLI-GRO Western Mix is a means of obtaining a quick response to needed elements. Foliar applications of FOLI-GRO Western Mix may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system. FOLI-GRO Western Mix should be used as part of a comprehensive Total Nutrition System for optimizing plant growth, development, yield, and quality.

Limitations, Restrictions, and Exceptions

Application of FOLI-GRO Western Mix is preferred early in plant's development. Those crops that are susceptible to iron deficiency may require a continuous supply of iron that is applied at low rates. Foliar applications are preferred over soil applications. Split applications are preferred over a single application (50% early in the plant's development and 50% prior to flowering or pollination).
