

APPLICATION

General Information

GENERAL INFORMATION

FOLI-GRO K-Source is designed primarily for foliar applications to prevent or correct potassium deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality.

Application of FOLI-GRO K-Source is a means of obtaining a quick response to needed elements. Foliar applications of FOLI-GRO K-Source may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system.

FOLI-GRO K-Source should be used as part of a comprehensive Total Nutrition System for optimizing plant growth, development, yield and quality.

DIRECTIONS FOR USE

FOLI-GRO K-Source may be applied as a foliar spray by air, ground concentrate or dilute. Maintain agitation to provide uniform distribution within spray tank. Use of a high quality CPDA approved spreader, such as R-11, at recommended rates to improve spray cover is usually advised. Do not apply when plants are under excessive heat or moisture stress. Applications of foliar nutrients to leafy vegetables or soft-skinned fruits during periods of excessive temperatures may cause cosmetic injury. Applications of certain micronutrients to fleshy fruits within 30 days of harvest may result in staining of rind or skin.

Mix 3-5 gallons per acre in sufficient water for thorough coverage. Apply to foliage on almond trees beginning at early pink bud and as desired during the pollination period.

COMPATIBILITY

Always jar test new combinations for compatibility prior to field mixing.

Limitations, Restrictions, and Exceptions

Optimum rate of application will vary based on a variety of factors including degree of need or deficiency, growth stage, yield potential, environmental conditions, existing soil fertility levels, etc.
