

VEGETABLE CROPS

General Information

GENERAL INFORMATION

NDEMAND ENTOURAGE K is powered by NITAMIN Steady- Delivery System nitrogen. NDEMAND products are designed primarily for foliar applications to prevent or correct nutrient deficiencies in a wide range of agronomic and ornamental plants. Their use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality.

Application of NDEMAND ENTOURAGE K is a means of obtaining a quick response to needed elements. Foliar applications of NDEMAND ENTOURAGE K may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system.

NDEMAND ENTOURAGE K should be used as part of a comprehensive Total Nutrition System for optimizing plant growth, development, yield and quality.

Directions for Use

NDEMAND ENTOURAGE K may be applied as a foliar spray by air, ground concentrate or dilute. Maintain agitation to provide uniform distribution within spray tank. Use of a high quality CPDA approved spreader such as R-11 at recommended rates to improve spray cover is usually advised. Do not apply when plants are under excessive heat or moisture stress. Applications of foliar nutrients to leafy vegetables or soft-skinned fruits during periods of excessive temperatures may cause cosmetic injury. Applications of certain micronutrients to fleshy fruits within 30 days of harvest may result in staining of rind or skin.

It is advised that NDEMAND ENTOURAGE K be diluted with water at no less than 2 parts water to 1 part NDEMAND ENTOURAGE K. Applications that are made when daytime temperatures exceed 82°F within the following 24 hours may experience foliar burn when high rates are utilized.

NDEMAND ENTOURAGE K can be soil applied as a band or sidedress. Timing of treatments should be based on crop nutrient demand, prevailing environmental

conditions, plant tissue analysis data or other information that indicates a need for fast-acting, supplemental nitrogen or potassium.

Limitations, Restrictions, and Exceptions

Rates as high as 5 gallons per acre may be used on crucifers.
