

VEGETABLE CROPS

General Information

GENERAL INFORMATION

NDEMAND ENTOURAGE is powered by NITAMIN Steady- Delivery System nitrogen.

NDEMAND ENTOURAGE products are designed primarily for foliar applications to prevent or correct nutrient deficiencies in a wide range of agronomic and ornamental plants. Their use is suggested as part of a Total Nutrition System to enhance yields and quality.

Application of NDEMAND ENTOURAGE is a means of obtaining a quick response to needed elements. Foliar applications of NDEMAND ENTOURAGE may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system.

Research has shown that foliar-applied nutrients are absorbed more efficiently by plants than are those supplied from the soil. Nutrient translocation to all parts of the plant is generally more rapid when applied as a foliar treatment.

Avoid applications of foliar nutrients to crops during periods of moisture, salinity or heat stress.

A good tissue testing program may be helpful to monitor and to maintain optimum plant growth and development.

Limitations, Restrictions, and Exceptions

Apply 1-3 gallons per acre for most vegetable crops. Rates as high as 5 gallons per acre may be used on crucifers.
