

AIR APPLICATION

General Information

GAINER is generally compatible with pesticides and other fertilizers. Determine compatibility with a jar test before mixing products.

COMPATIBILITY: GAINER is compatible with most commonly used pesticides. Do not use with lead arsenate, hydrated lime, lime sulfur, or other strongly alkaline materials. Do not use with amine form of 2,4-D or with dicamba (e.g. Banvel). In all cases, it is recommended that a jar test be made to determine compatibility of GAINER with other materials before proceeding with high volume mixing.

Limitations, Restrictions, and Exceptions

- Fill tank with water. Start agitation. Add GAINER slowly and continue agitating until product is completely dissolved. Use this procedure only. DO NOT pre-mix as slurry. Add pesticide last.
- When temperatures are cold, allow extra time for this product to completely dissolve.
- If additional wetting is required, add a non-ionic spreader at 1 pint per 100 gal. or 1 pint per acre by air. Avoid foliage application when plants are suffering from abnormal growing conditions due to heat stress or drought.
- Do not use on Golden Delicious during slow drying conditions.
- Exceeding 2 lbs. GAINER, or other materials, per gallon of water will over-saturate spray solution and cause a precipitate. Do not exceed 2 lbs. GAINER per gallon of water.
