

MODERATE DEFICIENCY

General Information

GENERAL INFORMATION

A granular Iron Lignosulfate plant nutrient compound.

Derived from iron sulfate and iron lignosulfonate. The iron in this product is complexed with lignosulfonate.

DIRECTIONS FOR USE:

This product is recommended for soil application for correction of iron deficiencies, as determined by foliar and soil testing, in field crops of alfalfa, barley, canola, corn, beans, potatoes, sugar beets, wheat and other crops as recommended by an agricultural representative or professional agricultural consultant. For best results apply in a band with starter fertilizer at seeding time. Side dressing and broadcast methods are also effective.
