

MODERATE DEFICIENCY

General Information

GENERAL INFORMATION:

A granular manganese Lignosulfonate plant nutrient compound.

Derived from manganese sulfate and manganese lignosulfonate. The manganese in this product is complexed with lignosulfonate.

DIRECTIONS FOR USE: This product is recommended for soil application for correction of manganese deficiencies, as determined by foliar and soil testing, in field crops of corn, potatoes, wheat and other crops as recommended by an agricultural representative or professional agricultural consultant. For best results apply in a band with starter fertilizer at seeding time. Side dressing and broadcast methods are also effective.
