

## **AERIAL APPLICATION**

### General Information

#### GENERAL INFORMATION

Metho-Sil is a unique blend of highly refined and modified spray oil and nonionic organosilicone. Metho-Sil's unique chemistry allows for enhanced wetting and absorption of those pesticides or products which labels recommend the addition of a spray adjuvant to improve performance. The addition of Metho-Sil to a spray tank solution will improve a spray application by physically modifying the wetting and spreading characteristics, the result being a more uniform spray deposit. Observe initial application to insure thorough coverage without excessive runoff of the spray.

#### DIRECTIONS FOR USE

The use of Metho-Sil can increase pesticidal activity where the following factors occur, but is not limited to:

1. When used in areas of the country with low relative humidity and high temperatures.
2. When used with low water volume rates of less than 15 gpa.
3. When target species are larger than label recommendations at time application.

Note: The application rates on the label are based on pesticide labels which recommend the use of a nonionic surfactant. Rates of this product may be increased or decreased for optimum results, follow pesticide labeling for proper recommendations. Before using Metho-Sil where a nonionic surfactant may not be recommended the user or applicator advisor must have experience with the combination or must have conducted a phytotoxicity trial.
