

SUNFLOWER

General Information

SPRAY VOLUME

ONSET 3.6L may be applied in a minimum of 10 gallons of spray solution per acre by ground sprayer or in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment. Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied. If necessary, increase the spray volume per acre for complete crop coverage.

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, AND ESTUARIES.

Apply only during alternate years in fields adjacent to aquatic areas listed above.

Do not apply by ground or air within 100 feet of aquatic areas listed above.

Do not cultivate within 10 feet of an aquatic area to allow growth of a vegetative filter strip.

Limitations, Restrictions, and Exceptions

SUNFLOWER

Notes:

Apply higher rate to highly susceptible varieties and/or under severe disease conditions. Apply specific dosage in a minimum of 20 gallons of spray solution per acre by ground or a minimum of 5 gallons of spray solution by air.

General Comments:

For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with ONSET 3.6L. Contact your state Extension Service or Winfield Solutions representative for a list of approved surfactants. ONSET 3.6L must have two to four hours of drying time on plant foliage for the active ingredient to move

systemically into plant tissue before rain or irrigation occurs. After this period of time, ONSET 3.6L will be resistant to weathering. ONSET 3.6L is a demethylation inhibitor (DMI) fungicide (Group 3).
