

MILD DEFICIENCY

General Information

A GRANULAR COPPER LIGNOSULFONATE PLANT NUTRIENT COMPOUND.

DIRECTIONS FOR USE: This product is recommended for soil application for correction of copper deficiencies, as determined by foliar and soil testing, in field crops of alfalfa, barley, canola, corn, potatoes, wheat and other crops as recommended by an agricultural representative or professional agricultural consultant. For best results apply in a band with starter fertilizer at seeding time. Side dressing and broadcast methods are also effective.

Limitations, Restrictions, and Exceptions

Side dressing and broadcast methods are also effective.
