

## **AQUATIC USE**

### General Information

#### GENERAL INFORMATION:

PREFERENCE nonionic surfactant is a low foam surfactant used to improve the effectiveness of foliarapplied insecticides, herbicides, fungicides and defoliant. By adding PREFERENCE nonionic surfactant to the spray mixture, it will reduce surface tension of spray droplets, resulting in more thorough wetting of leaf surfaces and will aid in pesticide absorption by leaves and foliage.

MIX WELL BEFORE USING.

### Limitations, Restrictions, and Exceptions

Aquatic Use: Use 1 to 2 quarts of PREFERENCE per 100 gallons of spray solution in aquatic weed control applications. Always follow herbicide label for specific directions and precautions.

NOTE: Carefully read the directions and precautions contained on the label of the herbicide, insecticide, or fungicide with which PREFERENCE is to be used. Follow pesticide label instructions to determine when PREFERENCE should be added to the spray mixture and for the proper rate.
