

SOIL APPLICATION - MODERATE DEFICIENCY

General Information

GENERAL INFORMATION:

ULTRA-CHE Magnesium 2.5% EDTA is generally compatible with pesticides and fertilizer solutions. Add this nutrient to water before adding pesticides. It is always advisable to test for compatibility on a small scale before tank mixing product.

For best results, foliar applications of ULTRA-CHE Magnesium 2.5% EDTA should be made in early morning or late evening. Some foliar burning can result if applied during hot, dry daytime conditions. The recommended rates have been extremely successful for foliar usage, though phytotoxic symptoms may occasionally occur on sensitive crops. Consult your state Agricultural Experiment Station or Extension Agent for additional information on rates, timing of application and sensitivity of varieties or hybrids to phytotoxicity.

ULTRA-CHE Magnesium 2.5% EDTA is a fully chelated secondary nutrient recommended especially for:

1. Mixing with liquid fertilizers for pre-emergence or post-emergence application.
2. Mixing with liquid fertilizers for foliar application.
3. Application in irrigation water, either alone or in combination with fertilizers and/or pesticides.
4. Mixing with pesticide spray solutions for soil or foliar application.
5. Application either alone or as a component in other liquid mixtures where soil application is otherwise impractical.
