

MEDIUM APPLICATION

General Information

DIRECTIONS FOR USE

Apply only as directed during the growing season.

Use Andersons Golf Products Contec DG Dispersing Granule Technology 12-3-12 for greens, tees and other fine turf areas where a nitrogen, phosphorous and potassium fertilization is desired or when iron and manganese are needed to help correct or prevent deficiencies during the growing season.

Watering in this product will disperse each granule into thousands of particles. This will facilitate the movement of the nutrients into the soil. This particle dispersion will also greatly reduce ball, shoe and mower pickup. Cold weather and/or cold water (lower than 45°F / 7°C) can result in slower particle dispersion.

Application to wet, close-cut golf turf may result in foliar staining, which will discolor the turf to a brown/black appearance. This can occur even if immediate irrigation or rainfall occurs. It is recommended that this product be applied to dry turf only.

For all applications:

Immediately after application, for optimum results, apply a minimum of 0.1 to 0.2 inches of water to disperse the granules.

Note: This product contains the micronutrient iron for extra greening and to help prevent iron deficiency. Iron may stain concrete and other surfaces. Misapplied product to these surfaces should be removed promptly by sweeping or blowing. Do not wash off with water.

Recent research has shown that environmental buffers prevent pollutants from entering our natural water bodies. To help protect these natural resources, avoid applying product to sidewalks, driveways, roadways, and other impervious surfaces. Sweep any misplaced granules back onto the area you are treating immediately after application, since storm drains often empty directly to nearby waterways.

- Refer to the label for Suggested Spreader Settings.
