

# LEGUMES

## General Information

### PRODUCT INFORMATION

Dyna Gold Peanut Mix is a concentrated foliar formulation of chelated micronutrients that combines high solubility with convenience for both aerial and ground applications. It is rapidly assimilated by most crops and will, under normal circumstances, prevent micronutrient deficiencies. Dyna Gold Peanut Mix has a low pH and will reduce the pH of your spray water. A jar test to check the compatibilities of unfamiliar or new combinations should be performed prior to mixing and application.

### DIRECTIONS FOR USE

Fill tank 2/3 full of water, add correct amount of Dyna Gold Peanut Mix, add other chemicals with agitation. Fill tank with water.

#### Ground Application - Foliar

Dilute Spray: Use a minimum of 40 gallons of water per acre.

Concentrate Spray: Use a minimum of 20 gallons of water per acre.

#### Air Application

Beco-mist, helicopter, and fixed wing: 1 quart per acre in minimum of 5 gallons of water per acre. Additional water is desirable and will give better coverage. The addition of a non-ionic surfactant will improve product performance.

#### Limitations, Restrictions, and Exceptions

Legumes: (Peanuts, soybeans, peas, snapbeans and clovers); apply one to two pints per acre in enough water to allow for thorough coverage. For optimum results, 2 to 4 applications at regular intervals may be necessary.
