

TURFS, TEES AND GREENS

General Information

INFORMATION

Dyna-Phos is a liquid foliar formulation designed for soil application as a drench or irrigation supplement. Dyna-Phos may be applied through drip-tape or micro-sprinkler irrigation systems to prevent calcium carbonate buildup resulting from hard irrigation water. Dyna-Phos is comprised of ortho-phosphate a readily available form of phosphorous that will stimulate root growth and lower the soil pH.

DIRECTIONS FOR USE

Dyna-Phos should be applied as needed starting with the first spray at 1 to 2 quarts per application in enough water to allow for thorough coverage but not run off.

Limitations, Restrictions, and Exceptions

TURFS, TEES AND GREENS

Apply this product to reduce calcium carbonate build-up and supply necessary available phosphate.
