

FRUIT CROPS

General Information

INFORMATION

DynaCal Calcium 10.25% is chelated with Sorbitol for use as a supplement to aid in the prevention and correction of calcium deficiency. It is buffered at a neutral pH which permits its solubility in tank mixes. It has additional additives that enhance plant cell wall penetration. For best results it should be used with a balanced fertility program with good liming practices and should not be used to correct soil pH. Do not use with foliar fertilizer containing high amounts of phosphates or products that contain sulfate.

DIRECTIONS FOR USE

DynaCal Calcium should be applied weekly starting at early bloom throughout harvest in enough water to cover.

Aerial Application: Use specific rate in 5 to 10 gallons of water per acre.

Limitations, Restrictions, and Exceptions

Fruit Crops: Apply in enough water to cover and wet to run off.
