

GARDEN FRUITS AND VEGETABLES INCLUDING MELONS, BERRIES AND NUT TREES

Limitations, Restrictions, and Exceptions

GARDEN FRUITS AND VEGETABLES INCLUDING MELONS, BERRIES AND NUT TREES

Spray thoroughly making sure to penetrate dense foliage. Apply every 5 to 7 days when insects are present. Repeat as needed to control infestations. May be applied the same day as harvest.

USE TIPS:

1. Hard to control insects may require 2 to 3 applications.
2. Spray in early morning or early evening when it is cooler.
3. For best results, apply to both sides of plant leaves and all plant surfaces where insects are found.

NOTE: Some plants may be sensitive to plant oils under certain conditions. Do not use on newly planted cuttings or plants stressed by drought. Do not apply in direct sunlight or when temperatures exceed 90° F. Do not spray the blooms directly.
