

BEANS AND OTHER LEGUMES

General Information

PRODUCT INFORMATION

PRODUCT INFORMATION

Soar Bloom Spray is a balanced combination of chelated micronutrients, Ascophylum nodosum (seaweed), humic and fulvic acids that activate the production of beneficial enzymes and catalysts within the plant. These biologically active seaweed based compounds aid in breaking down complex starch molecules (oligosaccharins) providing more available energy to be used in active transport and absorption of minerals. High quality humic and fulvic acids have also been added to the blend to optimize the assimilation and translocation of nutrients. This synergistic mix has been specially formulated to correct and prevent mineral deficiencies and stimulate plant growth, especially during periods of environmental stress. Plant response to this next generation of biostimulant chemistry can result in increased uptake of nutrients, and higher marketable yields on most crops.

DIRECTIONS FOR USE

1. Do not mix with foliar or ground applied liquid fertilizers containing phosphates.
2. A jar-test to check the compatibilities of unfamiliar or new combinations should be performed prior mixing and application.
3. Aerial Application: Apply the recommended rate in adequate water to ensure proper mixing and coverage. The addition of a non-ionic surfactant will improve coverage.
4. Total maximum of 2 gallons per acre per growing season.

Limitations, Restrictions, and Exceptions

Beans and other Legumes: Apply at first flower, and repeat application every 7 to 10 days during pod development in enough water for thorough coverage.

Method

[Broadcast/Foliar Air](#)
